(shown with lower cabinet)

Dimensions: 24 3/16" (61.44cm) w x 2" (5.08cm) h x 24 7/16" (62.07cm) d

Splash Guard: 6" (15.24cm)

Weight: 25lbs

Attractively positioned in a clean room, the CS-1 Wash Sink is used to manually clean bottles prior to pure water filling.

A bottle is placed in the deep sink. A washing solution is located in the soap dispenser. The required amount of washing solution is sprayed on a cloth. The bottle is wiped down. Following washing, the pull out swivel faucet sprays down all outside areas of the bottle. The bottle is now ready to be cleaned on the inside and filled with pure water.

A 6" splash guard protects against spillage and any over flow of water is gathered quickly and disposed of down the drain.

The CS-1 Bottle Wash Sink is constructed of high grade stainless steel and is manufactured as a countertop to be positioned on a customer designed lower cabinet. It is an economically priced product that allows any bottled water business to enter into the market of cleaning and filling bottles for the bottled water delivery market.

All specifications are subject to change without notice.
